Proposal

1. Names: Dante Basile, Jocelyn Hsu
2. Idea: The general concept of this project is to make a stock market simulator. The program will host a command-line trading game. It will match buyers with sellers and record all transactions. Data could be real or simulated.
3. Libraries:
    a. Core: data structures
    b. yojason: store game state
    c. Yahoo Finance API: if real data is used
    d. Async: API access
